AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A sheet feeder comprising:

a sheet receptacle disposed at the flank of a main apparatus for holding sheets

thereon;

a feeding device rotatably arranged at the flank for sending sheets from the sheet

receptacle into the main apparatus; and

an urging mechanism for pressing the feeding means device by transmission of

the drive force from a predetermined drive source,

wherein the feeding device is rotatably shifted between an operating position in which

sheet feeding action is made and a retracted position in which the device is retracted at the flank

of the main apparatus while a predetermined waiting position is disposed between the operating

position and the retracted position, and the feeding device is urged by the urging mechanism, at

least when set at the operating position and the waiting position and is freed from the urging of

the urging mechanism when placed between the waiting position and the retracted position.

2. (Original) The sheet feeder according to Claim 1, wherein the urging mechanism

has a predetermined range of play so that the rotation of the feeding device from the waiting

position to the retracted position can be made within the predetermined range of play.

3. (Original) The sheet feeder according to Claim 2, wherein the urging mechanism

includes a projected portion joined to one of either the drive source or the feeding device and a

hollowed portion joined to the other for loosely receiving the projected portion, so as to define

the predetermined range of play.

Application No. 10/643,924 Reply to Office Action of September 20, 2005 Docket No.: 1152-0305P
